Mini Quiz – Human Impacts on the Environment

Focus: Pollution · Habitat Loss · Invasive Species

Reading Passage:

Human activities are changing ecosystems at a rapid pace. Pollution affects air, water, and soil, while habitat destruction removes the homes of many species. Invasive species can outcompete native organisms, and overuse of natural resources can reduce biodiversity. Understanding these impacts helps us make better environmental decisions.

1. What is one example of human-caused pollution?

2. What does habitat destruction mean?

3. Name one invasive species found in Ontario.

4. What is overexploitation?

5. Why is biodiversity important?

Tutoring Tip:

Ask students to think of examples from local news or their neighbourhood.
